Bugs

One issue I ran into was that my SVGs weren't loading correctly for the buttons and so I deleted the images from my assets and manually styled them in my stylesheet. I also found it difficult to use a button-operated selector for the quantity inputs, so I switched those out for a regular input tag in my cart div.

Things I learned

- How to parse through the DOM and select the elements of interest in Javascript

```
var cartItemContainer = document.getElementById("cartConfirm")[0]
var cartRows = cartItemContainer.getElementsByClassName("cartRow")
```

- How to utilize flex in CSS in order to do things like center divs and justify content
- How to make an unordered list display inline with no bullet points and spacing in between
- How to make a quantity selector that updates a two or more different spans at once using Javascript functions
- How to hide content and show it upon expansion of the div
